Cars, Ramps, Photogates: An Integrated Approach to Teaching Linear Equations (Teachers Edition) Gregory Lakey 2019-08-07 Mathematics can be very boring!! Passing out mundane worksheets that do not bridge connections is a waste of time. As mathematics educators, we struggle to find projects or activities that engage students; this is one that does. I currently start this project on the first day of school every year. Students have always enjoyed manipulating the cars, ramps, or photogates to gather the data needed. The way this project integrates Algebra 1, Algebra 2, and Statistics has been great with regards to the "'connections' made. Where students have previously struggled with seeing how different content or subjects tie together, they are able to do so throughout the duration of this curriculum. Take your time with this project, please read throughout it, use the resources I provided, and just enjoy it. I have fun with this project every year and I know you will too. P.S - A Car and Ramp set must be purchased for this curriculum to be effective. Mr. Gregory P. Lakey

Mathwise Linear Equations Honorary Consultant Endocrinologist Department of Endocrinology Peter Wise 2015-11-24 For a video description of the MathWise series of workbooks click on the "Follow the Author" - Peter L. Wise. MathWise books are specially designed to be unique and effective. Most math textbooks and workbooks have a mini-lecture at the beginning of each lesson, and then have pages of problems. Students often get impatient with the explanations and have difficulty knowing how to proceed to work the problems. The format looks dry and boring, and students lose interest. MathWise books communicate with students as they work through the book. The answer boxes teach good technique, neatness, and organization. Students are guided through the steps in a friendly way, with speech bubbles giving hints and explanations. MathWise books emphasize deeper level understanding of the material-how and why math works the way it does. The key is: "Understand more, memorize less." MathWise books all work together to ensure the development of strong number sense and mathematical thinking. MathWise Linear Equations starts with the basics of graphing and progresses to a wide range of topics, including: Slope Slope-intercept form Solving for intercepts Solving for x- or y-values Finding equations from 2 points Standard-form equations Point Slope equations Linear inequalities Systems of equations SPECIAL FEATURES Tips and Tricks Students have found the tips and tricks to be helpful and memorable, and they have also found that they add interest and excitement to their math studies. Speech Bubbles with Teacher Insights Speech bubbles are used to provide guidance, point out insights, or give helpful hints as students are solving math problems. Students learn best by doing, and the instruction given in the speech bubbles is designed to (1) sharpen students' powers of observation, (2) increase number sense, and (3) instruct in digestible chunks. Simplicity of Instruction Every page (excluding review pages or quizzes) has a specific focus. Most pages have generous amounts of white space to keep students focused. Movement is from the simple to the increasingly complex. Step-By-Step Procedures Students learn best when given explicit, step-by-step instruction. When several steps are involved, the steps are numbered. This makes learning much more logical and memorable. Logical-Sequential Instruction Carefully designed problems are presented in a logical sequence, so that previous answers contribute to students' abilities to solve future problems. The order in which math problems are presented is critical to promoting number sense. This edition comes with an answer key and is reproducible for single-classroom use.
